

A widget is small, pre-coded section of your website that showcases products with features, such as eye-catching movement.

# Choosing Widgets

Every layout features different widget options and positions to showcase products.

1. Once you've chosen a new layout, you'll be redirected to a page that asks you to choose widgets. Click in the placeholder boxes that read "CLICK HERE to choose widget."

2. You'll arrive at the **Widget Library** where you can choose from widgets that are compatible for that particular placeholder. Click the Apply button when you've chosen a widget.
